

EVAN H. YEARWOOD

Identity & Access Management | Active Directory | Okta | PowerShell Automation

New York, NY | (347) 418-6709 | eyearwood308@gmail.com | [LinkedIn](https://www.linkedin.com/in/evanhyearwood/) | github.com/EvanHYearwood

PROFESSIONAL SUMMARY

IAM-focused IT professional transitioning into Identity & Access Management with hands-on lab experience across the full identity lifecycle, provisioning, access governance, and de-provisioning in hybrid AD + Okta environments. Completed three advanced portfolio projects demonstrating **Joiner-Mover-Leaver automation**, **RBAC design**, **SAML 2.0 SSO**, and **certificate-based API authentication**, all documented with video walkthroughs and GitHub repositories. Currently working as a Tier 2 Technical Support Specialist at Yext, where daily work includes API troubleshooting, SQL-based access investigations, and cross-platform SaaS integrations. Pursuing SC-300 and Okta Certified Administrator certifications.

CORE COMPETENCIES

IAM & Identity: Active Directory, Okta, Microsoft Entra ID, RBAC, JML Lifecycle, Provisioning/De-provisioning, Group Policy, Least Privilege, SAML 2.0, OAuth 2.0, JWT

Scripting & Automation: PowerShell (AD, REST API, certificate auth), Python, SQL, Okta REST API, Postman

Cloud & Infrastructure: Microsoft Azure (VMs, VNets, NSGs, Entra ID P2), Windows Server, DNS, DHCP, TCP/IP

Tools & Platforms: Zendesk, osTicket, Microsoft 365, Power BI, Wireshark, TCPdump, GitHub

Documentation: Root cause analysis, runbooks, GitHub README, video debriefs, architecture diagrams

IAM PORTFOLIO PROJECTS

All projects simulate real enterprise IAM workflows and include video walkthroughs and screenshot proof of work. Full portfolio: github.com/EvanHYearwood

Automated JML Lifecycle, AD + Okta + PowerShell (Cert-Based AuthN) Feb 2026 – Present

 **Video & Screenshot Proof:** <https://github.com/EvanHYearwood/Automated-JML-Cert-Based-AuthN>

- Built a full Joiner-Mover-Leaver automation pipeline integrating on-prem Active Directory (corp.local) with Okta, driven by CSV input and orchestrated entirely via PowerShell 7.
- Implemented certificate-based API authentication (private_key_jwt / RSA) using Windows Certificate Store, eliminating plaintext secrets and demonstrating production-grade security posture.
- Engineered a master provisioning script (Invoke-JMLProvisioning.ps1) with continue-on-failure execution, structured three-part error reporting (Reason / Action / Impact), and automatic JML type detection from filename.
- Configured Okta API Services app with scoped permissions (okta.users.manage, okta.groups.manage) and resolved real-world auth errors: PEM format rejection, missing client_id, and DPoP enforcement.
- **Stack:** Active Directory · Okta · PowerShell 7 · OAuth 2.0 · RSA · JWT · Windows Certificate Store

Implementing RBAC with Active Directory + Okta Jan 2026 – Feb 2026

 **Video & Screenshot Proof:** <https://github.com/EvanHYearwood/RBAC-W-AD-Okta>

- Designed and deployed a multi-user AD domain (yearwood.local) with structured OU hierarchy, 4 role-based security groups, and PowerShell-automated provisioning across 16 domain accounts.
- Integrated on-prem AD with Okta via AD Agent, configured Full Import workflows, resolved APP_GROUP ownership conflicts, and established verified DN and externalId group sync.
- Diagnosed and remediated access sprawl across three simultaneous access paths: nested AD group inheritance, 163 direct user-to-app API assignments from SAML testing, and orphaned APP_GROUP provisioning conflicts.
- Implemented 10 group-to-app RBAC assignments via Okta REST API (PowerShell) across Google Workspace, SharePoint, and Slack, verified clean access with zero direct assignments using Okta's Access Testing Tool.

- **Stack:** Active Directory · Okta · SAML · PowerShell · REST API

SaaS App Integration with Okta SAML 2.0 (Slack, Google Workspace, SharePoint) *Dec 2025 – Jan 2026*

📺 **Video & Screenshot Proof:** <https://github.com/EvanHYearwood/SaaS-App-Integration-Okta-SAML>

- Built three Python Flask applications simulating Slack, Google Workspace, and SharePoint as SAML Service Providers, hosted on yearwood.local and federated to Okta as the Identity Provider.
- Configured Okta SAML 2.0 apps end-to-end: ACS URLs, Entity IDs, attribute mappings, and SP-initiated / IdP-initiated SSO flows, demonstrating prerequisite identity foundation for all subsequent labs.
- Produced architecture diagrams, an interactive SSO workflow stepper, and a structured SAML README documenting the full SP + IdP integration lifecycle.
- **Stack:** Okta · SAML 2.0 · Python (Flask) · Active Directory · XML

PROFESSIONAL EXPERIENCE

Technical Support Specialist, Tier 2, Yext, New York, NY *Jan 2025 – Present*

- Deliver B2B technical support for a global SaaS platform managing identity and data integrations across 200+ publishers including Google, Apple, and Facebook.
- Execute SQL-driven investigations to analyze data, access patterns and employee login behavior, identifying security anomalies and escalating to appropriate teams.
- Resolved user provisioning and access issues for enterprise accounts on a global SaaS platform, including configuring and troubleshooting SSO, SAML, and role-based access (RBAC).
- Resolved an RBAC misconfiguration for an enterprise client by auditing their access permissions, identifying a missing role assignment, and restoring correct access through a documented approval process.
- Use SQL to investigate login activity and access patterns, flagging anomalies and escalating potential security issues to engineering.
- Troubleshoot API authentication failures and data sync issues using Postman across 200+ publisher integrations including Google, Apple, and Facebook.
- Act as an escalation point for complex platform issues, login failures, sync errors, and system-level bugs, for enterprise clients managing thousands of business locations.
- Resolved a high-impact integration issue that protected 5,000+ client listings from business disruption, translating the technical fix into clear updates for non-technical stakeholders.
- Supported a global rebranding rollout for an international enterprise client, directly contributing to a multi-million dollar renewal.

IT Support Technician (Intern), Log(N) Pacific, Remote *Aug 2024 – Jan 2025*

- Administered Active Directory environments end-to-end: user creation, OU management, role assignment, and security group configuration to enforce proper resource access.
- Assisted with employee onboarding and offboarding, provisioned accounts, configured access, and documented procedures in the knowledge base.
- Provisioned and hardened Azure Virtual Machines, configuring VNets and NSGs to establish secure cloud perimeters.
- Deployed osTicket platforms with SLA configuration and automated ticket routing; troubleshot DNS and DHCP issues reducing system downtime.

CERTIFICATIONS & EDUCATION

- ✓ Microsoft Certified: MS-900, Microsoft 365 Fundamentals
- ✓ Google Cybersecurity Professional Certificate
- ✓ Security Blue Team, Introduction to Network Analysis (Wireshark / TCPdump)
- → Microsoft Certified: AZ-900, Azure Fundamentals (Expected Apr 2026)
- → Microsoft Certified: SC-300, Identity & Access Administrator (In Progress)
- → Okta Certified Administrator (Targeted)
